

BRING FUTURE ECONOMIC RISKS AND OPPORTUNITIES INTO FOCUS

Amid growing global uncertainty, Prevedere helps companies systematically identify and quantify the influence of economic factors on future business outcomes.

Economic volatility. Digital disruption. Dramatic changes in consumer behavior. It's tough to set a strategy for success in such an uncertain business environment.

That's why leading enterprises rely on Prevedere's predictive economic intelligence solutions to help navigate the turbulent waters ahead.

You can anticipate a softening in demand or an upswing in sales months before it happens. And with the right proactive moves, your business can achieve superior financial results, whatever the future holds.

BUSINESS OUTLOOKS BASED ON LEADING INDICATORS

There's never been more data about economic and consumer activity. Prevedere's innovation is to mine all that information for clues about what's in store for your business.

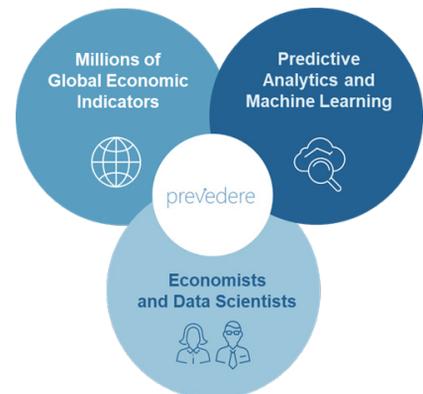

We've harnessed the power of AI, the cloud, and predictive analytics to deliver forward-looking insights that are uniquely relevant to your company. These insights are strategic, actionable, and more timely than ever.

You'll know which economic factors are leading indicators for your business and what they're "saying" about your business outlook. Will sales go up or down, by how much, and when? For the first time ever, you can make strategic plans and investments with a data-driven view of your future economic risks and opportunities.

- 
See what lies ahead for your business

- 
Solve for upcoming headwinds and tailwinds

- 
Succeed in a highly volatile economic climate

SEE WHAT YOU'VE BEEN MISSING

Even though economic cycles have a significant impact on business fortunes, many companies don't account for economic and other external factors in their business planning activities.

This is a very costly blind spot. Without predictive economic intelligence, your business risks over-investing in a downturn, under-investing in an upturn, and missing its numbers due to unexpected changes in the market.

external data in
planning processes²

With Prevedere, you have a clearer view of economic influences and a longer lead time to pivot. You can drive growth by capitalizing on upcoming tailwinds and take steps to protect profitability when facing headwinds. You can also be more proactive and resilient than competitors, which is a real edge in today's dynamic business world.

ADD INTELLIGENCE TO BUSINESS PLANNING

Predictive economic intelligence is a valuable input to strategic, financial and operational planning. Executives use our insights to answer questions like:

- What's the right growth target for next year?
- Was that weak quarter a seasonal slump or a sign of worse things to come?
- Should we increase or decrease spending in this product category, business unit, or market?
- Does this investment in more marketing or production capacity make sense right now?

EXPERT SERVICES ENSURE SUCCESS

Prevedere's managed services can provide you an extra level of support to develop your custom models and integrate economic insights into your planning processes.
