Prevedere Advanced Predictive Planning Platform

Prevedere Advanced Predictive Planning Platform

The Prevedere Predictive Planning Platform is a patented market-leading technology for identifying relevant external factors and creating forward looking econometric models.

Platform overview

1. Prevedere Discover

Identify all the external factors that can impact a business and its markets from the Prevedere Global Intelligence Cloud.

2. Prevedere Predict

Build forward looking econometric models from the leading indicators identified by Prevedere Discover.

Advanced Predictive Planning Lifecycle

4. Prevedere Protect

Automatically monitor the performance of predictive models created by Prevedere Predict and Prevedere Scenario.

3. Prevedere Scenario

Create forecasts from economic 'what-if' simulations and Prevedere Predict models.

Prevedere Global Intelligence Cloud

The Prevedere Global Intelligence Cloud augments internal data to drive Advanced Predictive Planning.

| Industry | Macro-economic | Consumer trends | Global trade | Weather & climate | Supply chain |

At the foundation of the Advanced Predictive Planning Platform is the Prevedere Global Intelligence Cloud. With millions of model-ready data sets from thousands of external sources, the Prevedere Global Intelligence Cloud augments internal data to drive Advanced Predictive Planning.

Prevedere has collated, indexed and prepared time series data from thousands of public and private data sources, providing a fast start for those organizations looking to include external data into their planning process.

The capabilities and insights of the Prevedere platform

Capability

Prevedere Discover

**Busines-impact engine matches dependent variable (e.g. US demand) to Intelligence Cloud indicators.**

Insights

Workbench of leading indicators that statistically present correlation and lead/lag prediction. Essentially a shortlist of external drivers that impact your business, increasing economic understanding for planning teams.

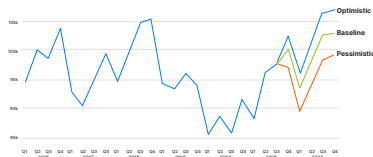

Prevedere Predict

Econometrics based modeling engine able to create, simulate and rank by prediction score.

Thousands of ranked models, based on permutations of Discover leading indicators. Predictive models include 12-18 month rolling forecasts and 2-5 year CAGR projections.

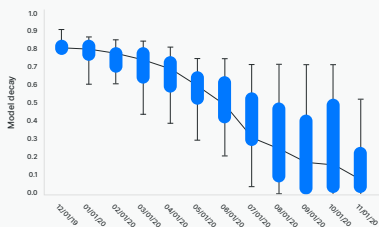

Prevedere Scenario

Simulation capability leveraging what-if techniques based on varying economic inputs.

Additional forecasts beyond economic baseline, including optimistic and pessimistic. Present future outcomes for multiple scenarios enabling planning agility and guard rails.

Prevedere Protect

Monitoring and alerting capability creates an early warning system for prediction models.

Automated model health checks occur periodically and when any modeling data changes. Protect alerts business owners when future predictions shift out of limits, enabling timely refinement of business plans and strategies.
