

Better business planning from smarter forecasting data

In an age of more frequent, rapid and seemingly unpredictable change, business planning must harness greater, forward looking intelligence from external sources.

Augments internal data with millions of model-ready data sets from thousands of external sources to drive Advanced Predictive Planning.

Extended Planning & Analytics

Prevedere Advanced Predictive Planning Platform

A patented market-leading technology that takes data from the Prevedere Global Intelligence Cloud.

1. Prevedere Discover

The engine that identifies all the external factors that can impact a specific business and its markets. Correlating internal company data with external leading indicators to reveal the blind spots of traditional planning.

2. Prevedere Predict

Taking the leading indicators to build forward looking econometric models. Using Artificial Intelligence (AI) to create, simulate then select best-fit models for greater planning confidence and strategic success.

3. Prevedere Scenario

Enhancing forecasting by using 'what-if' simulations. Adding optimistic and pessimistic predictions to baseline forecasts to create vital guard rails for better planning management.

4. Prevedere Protect

Continually and automatically monitoring the ongoing performance of each model. Triggering market shift and anomaly alerts to enable agile updating of plans.

Advanced Predictive Planning Lifecycle

Drive better decisions with better risk management and opportunity development by integrating the Prevedere Advanced Predictive Planning platform with your existing business planning solutions.
